

Anaphylaxis

New Dimensions

An online CME programme

Anaphylaxis is a potentially life-threatening event. GAIN (GA²LEN Anaphylaxis INitiative) has developed a highly interactive programme to address the lack of awareness of anaphylaxis and provide useful information on its treatment and prevention.

'Anaphylaxis – New Dimensions' consists of two, one hour CME modules containing slides, notes, questions, 3D animation and, to ensure the programme is realistic, case studies.

'Anaphylaxis – New Dimensions' is aimed at pan-European, general practitioners and emergency room physicians and is available in five languages: English, French, German, Italian and Spanish.

The programme will be launched in July 2008
